

Deep Blue SolarMax Bulb Replacement Guide

1. Slide out protective lens.

2. Turn bulb end caps counter-clockwise to loosen, and pull back caps, spacers and washers. Rotate bulb until pins slide out of slots.

3. Slide plastic parts off old bulb and reinstall on new bulb in the same positions. Slide new bulb into slots and rotate until you feel it 'click' into place. Slide caps, spacers and washers back into place and tighten, then slide lens back into fixture.
